BODY TREATMENTS

THE TAJA SCULPT

\$550 per session

\$2200 package

4 sessions

How It Works: During the treatment, a paddle applicator is placed over the muscle. Energy from the applicator treats underlying muscle tissue causing supramaximal contractions. These contractions are much more powerful and effective than what can be achieved in the gym. In fact, a single Taja Sculpt session is the same as doing 20,000 crunches, squats, bicep curls, triceps dips. Results: Patients report feeling results right after the procedure. More positive results are normally seen two to four weeks after your last session and continue to improve for several weeks following the treatments.

METHYLENE BLUE

\$500

Methylene Blue, available intravenously, helps generate more oxygen and energy in mitochondria, crucial for cellular function, especially in nervous tissue. With age, stress, inflammation, and poor diet, mitochondrial function declines. Methylene Blue repairs damaged mitochondria first, then improves others. It also enhances metabolism by improving mitochondrial function, respiration, oxygen consumption, ATP production, and glucose consumption. *Benefits:* Improves metabolism, boosts serotonin reducing anxiety and depression, enhances memory, mood, concentration, reduces inflammation, supports brain health, improves skin and connective tissue health, delays skin aging, aids with chronic pain, improves blood circulation, and combats infectious diseases.

OXYTOCIN "THE LOVE / CLIMAX HORMONE"

Available in IV + Booster IV \$350 Booster \$75

Oxytocin, produced in the hypothalamus and released by the pituitary gland, is a hormone that promotes positive feelings.

Physical Functions: It raises pain thresholds, lowers blood pressure and cortisol, reduces inflammation, and supports the immune system.

Social Interactions: Oxytocin influences behaviors like sexual arousal, trust, romantic attachment, and parent-infant bonding. It aids emotional adaptation, enhances communication between partners, and supports affectionate parenting. **Mental Health:** Oxytocin calms, reduces stress and anxiety, and promotes psychological stability. Low oxytocin levels are linked to depression, anxiety, and autism spectrum disorders.

Benefits: Reduces stress and anxiety, builds trust, enhances sexual arousal and emotional bonding, strengthens romantic attachment, fights disease, reduces inflammation, and supports the immune system.

WHAT IS NAD+ IV?

NAD+ (NICOTINAMIDE ADENINE DINUCLEOTIDE)

DELIVERED INTRAVENOUSLY (IV) IS A COENZYME THAT SERVES AS AN ESSENTIAL CATALYST FOR NUMEROUS CELLULAR PROCESSES. NAD+ PLAYS A VITAL ROLE IN ENERGY METABOLISM, DNA REPAIR, GENE EXPRESSION REGULATION, CELL REGENERATION AND CELL SIGNALING.

NAD (nicotinamide adenine dinucleotide) is a coenzyme found in the human body that plays a critical role in various cellular energy functions. Although abundant in the body, as an individual ages, NAD levels fall, reducing the amount of metabolic energy the body can produce. Regular NAD therapy sessions can increase the bioavailability of NAD in the body, which may further accentuate NAD's regenerative potential in the body.
